**Read complete instructions  
before installation!**  
**Improper installation may  
void warranty**

Description: Wire splice for 2015-2016 Ford F150 Switchback

For the installation please note that you will have two loose wires for the switchback function.

Brown wire will be (+) Positive and the black wire will be (-) Negative.

Both wires will need to be spliced into the turn signal bulb for the switchback function to work properly.

The two wires located at the bottom of the new AnzoUSA headlight will operate the switchback function.

Pictured above is a corner light bulb harness with integrated turn signal and parking light function.

To check the polarity of the wires, you can use a light testing tool to check. First turn on the turn signal and ground your light testing tool and insert the tip of the tool into the socket. When the light testing tool flashes you have located the (+) positive turn signal wire.

Locate the black (-) negative wire from the AnzoUSA headlight and splice that wire into the (-) negative wire on the turn signal harness, typically this wire will be black.

Locate the brown (+) positive wire from the AnzoUSA headlight and splice that wire into the (+) positive turn signal bulb wire. The positive turn signal bulb wire is typically the outside wire opposite of the negative wire.

If you need more assistance with the installation please see our Youtube channel or contact us at 888-360-3696 Mon-Fri 8AM - 5PM PST.
