## STEP 1

With the ignition switched off  
and the parking brake set,  
open the hood and

[Cookie Preferences](#) the negative

battery cable on the driver's side of the engine.

## STEP 2

Remove the panel push-in rivets attaching the air scoop cover with a flathead screwdriver by prying under the locating pins. Note: Collect these to be used later for re-installation. There are 12 in total. Please be sure to remove the two in the rear of the scoop cover connected to the factory scoop. A step stool may be required to reach.

## STEP 3

[Cookie Preferences](#)

Lift up the factory air scoop cover and remove it from the vehicle. Set it to the side, to be re-installed later.

## STEP 4

Remove the 2 bolts attaching the factory air scoop to the vehicle using a 10mm socket and driver. Collect these bolts and set them to the side, to be re-installed later.

[Cookie Preferences](#)

## STEP 5

Uninstall the factory engine cover by lifting up and pulling towards the front of the vehicle.

## STEP 6

Disconnect the crankcase vent tube by pulling the hose firmly away from the factory air tube.

## STEP 7

Remove the IAT sensor from the factory tube by twisting counterclockwise then pulling out of the factory tube, if it seized spray silicone lubricant to aid in its release

Cookie Preferences

## STEP 8

Using a 5/16" driver or socket, loosen the hose clamp on the factory tube connected at the throttle body.

## STEP 9

Using a panel popper remove the panel rivets securing the electrical harness connected to the factory airbox and air scoop locations

## STEP 10

Firmly Lift up and remove the  
factory intake assembly  
from the grommets of the

Cookie Preferences

vehicle. Set the assembly to the side

## STEP 11

Install the silicone scoop seal (I) onto the S&B airbox (K)

## STEP 12

Assemble the Silicone tube seal (L) onto the S&B Airbox (K)

Cookie Preferences

## STEP 13

Push the S&B Tube (**M**)  
through the Silicone tube seal  
(**L**)

## STEP 14

Assemble the IAT Grommet  
(**N**) onto the S&B Tube (**M**)

## STEP 15

Push the S&B Silicone  
Coupler (**P**) onto the S&B  
tube (**M**) and secure with #60  
Hose Clamp (**O**) using a 5/16"  
driver or socket. You may also  
place the #56 hose clamp (**Q**)  
over the opposite coupler  
end at this time. Leave the  
#56 hose clamp loose at this

[Cookie Preferences](#)

## STEP 16A

Attach the mounting bracket (G) to S&B airbox (K) by securing the  $\frac{1}{4}$ "-20 screws (D) and  $\frac{1}{4}$ " washers (E) first by hand tightening

## STEP 16B

Proceed to tighten firmly using an 11mm socket or nut driver

## STEP 17

Decide to install the optional S&B silicone plug (F) onto the

[Cookie Preferences](#)

(K) or leave out.

Box plug is recommend to be

installed in extreme heat conditions where average temperatures are above 100 Degrees Fahrenheit.

## STEP 18

Install the provided replacement S&B mounting grommets (**H**) onto the bottom of the S&B Airbox (**K**) and mounting bracket (**G**)

## STEP 19

Remove the top portion of the factory scoop by prying the tabs to the sides of the scoop from the factory intake assembly using a flathead

Cookie Preferences

## STEP 20

Align the factory scoop with the S&B Airbox (K). Push the factory scoop over the S&B scoop seal (I).

Drop the S&B Cold Air Intake assembly and factory scoop into the vehicle. Lining up grommets, Push in firmly onto the vehicles factory mounting locations

## STEP 21

Line up the silicone coupler  
Cookie Preferences → throttle body  
and push on the tube from

the inside of the airbox to align the coupler over the throttle body. Tighten the #56 hose clamp (Q) using a 5/16" driver or socket onto the throttle body.

## STEP 22

Line up factory scoop into the factory position and tighten the bolts, removed in step 4, using a 10mm socket or driver

## STEP 23A

Drop the Silicone S&B Air Filter (C) into the S&B Airbox (K) with the #88 hose clamp (J) attached loosely. Enter the airbox by the filter flange first, this will make it easier to align the filter flange onto the

Cookie Preferences the lower inner filter flange lip under the tube

and push in firmly over the tube.

## STEP 23B

Make sure the filter top is resting on the airbox stand-off

## STEP 23C

Tighten the hose clamp over the tube using a 5/16" nut driver

Cookie Preferences

## STEP 24

Reconnect the crankcase vent tube by sliding over the location on the S&B tube (M)  
Install the hose clamp (not shown) onto the CCV hose and tighten.

## STEP 25

Reconnect IAT sensor harnesses onto the S&B tube by twisting into the grommet (N)

Cookie Preferences

## STEP 26

Re-attach the scoop cover using the factory plastic rivets

## STEP 27

Remove the protective covering from S&B clear lid (A), be sure to remove the covering from inside the S&B logo!

## STEP 28

Install the Silicone Snap-in Lid seal (B) onto the S&B Clear Lid (A). Pull the seal over the edges of the lid until the lid is securely completely within the silicone snap-in seal.

Cookie Preferences

## STEP 29

Install the S&B Snap-in Clear Lid onto the S&B Air box by inserting one corner or edge of the seal fully first, then work around the lid pressing on each side.

## STEP 30

Reinstall the engine cover by pushing the locating features back into position and pressing down to secure.

## STEP 31
