ALL-NEW

The **PROFESSIONAL**

TopSide Creeper

- Nearly 20% higher reach to access much larger vehicles and equipment
- I-Beam Base provides 40% more positionability around engine compartment
- Quickly folds flat for much-improved stowability
- Excellent mobility from FOUR inch Synthetic Rubber Casters
- Nearly 20" wide ladder and deck for improved stability and no pinched torso
- Fully padded Sling-Deck chest pad for extraordinary comfort and ergonomic positioning
- Cable Management System keeps air lines and cables out of the way

The All New PROFESSIONAL Topside Creeper Comparison to The Original

Taller, Wider, Bigger and Better

The all new Professional Topside Creeper reaches 12" higher than The Original. This allows the Professional TopSide Creeper to access larger equipment such as big rigs, monster trucks, military vehicles and airplanes.

The NEW Professional TC is also significantly wider. This fixes the torso pinch problem of The Original. The greater width makes The Professional TopSide Creeper more stable and much more comfortable for the bigger technician.

I-Base Design for better positioning

The NEW Professional Topside Creeper has an I-Base design that allows more flexible positioning around the vehicle. The PRO TC allows the technician to reach 40% more area around the front of most vehicles and equipment.

Improved Mobility

The NEW Professional Topside Creeper glides into place - even over debris and rough shop floors. The new 5" synthetic rubber casters roll over most obstructions with ease. Two caster lock into place to provide leverage on tools.

TopSide Creeper

The All New PROFESSIONAL Topside Creeper Comparison to The Original

Improved Stowability

The NEW Professional Topside Creeper folds much more compact than the Original Topside Creeper. This is very important in space challenged shops.

The ProGear TopSide Creeper is also much easier to deploy and recover which saves valuable time and space.

Cable Management

The ProGear TopSide Creeper includes a Cable Management System. The wired technician can route cables or air hoses through the PigTail keepers and the lines are conveniently out of the way.

This is another feature of the ProGear TopSide Creeper that shows our understanding of today's technician. It's about productivity. The Cable Management System takes seconds to utilize but saves much more time in productivity.

This feature is particularly favorable for paint and body shops and aircraft maintenance.

More Comfortable

The ProGear TopSide Creeper has a fully padded frame with a replaceable, padded upholstery cover. The cover is secured using velcro, so it is removable for cleaning or replacement.

The upholstered cover slides over a sling instead of a hard plywood deck. This improves comfort, reduces weight and makes replacing the decking much easier.

That's not all...

Less Weight, Less Cube, Faster/Easier Assembly, Cheaper Shipping Cost

The ProGear TopSide Creeper has been engineered for extreme logistics. Our engineers have trimmed weight and changed our approach to assembly and packaging. The result is a much faster and less frustrating assembly (average assembly time cut by 60%) and significant decrease in shipping costs.

Product Customization

The ProGear TopSide Creeper may be customized for the dealer. We have capabilities to screen print, pad print, foil print, decal or embroidery many of the ProGear TopSide Creeper components. Component color schemes are also negotiable for Professional Tool Dealers.

Protected Market

The ProGear TopSide Creeper will only be available to Professional Tool Distributors.

Advertising Support

TraXion ProGear will support Professional Tool Distributors with 1/2 page advertising to both distributors and technicians in *Professional Tool & Equipment News*. (See December issue!)
