

Power Step

Made in USA | www.amp-research.com | 1-888-983-2206

LED Light Kit System

Engineered to integrate with the AMP Research Power Step wiring harness, four (4) low profile LED lights are strategically placed under the rocker panel for broad coverage and reliability in extreme driving conditions. When doors open, the running boards are illuminated. While doors are open the lights stay lit for a full five minutes, allowing plenty of time for entry or exit. When doors close, the lights turn off automatically when the steps retract.

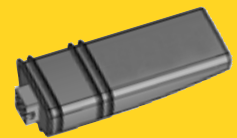

WATCH YOUR STEP! When the vehicle doors open and the step deploys, the LED lamps turn on (with a 5-minute auto-off feature) and automatically turn off when the vehicle doors close.

PLUG 'N PLAY

Designed to work with all AMP RESEARCH Power Step applications. Installs in under an hour by simply plugging the supplied wiring harness into the existing Power Step control module. Four LED lamps mount to the underside of the vehicle rocker panels with provided adhesive fasteners.

NOTE: If you have an early model AMP Research Power Step, it must be upgraded to the new style controller, shown above.
Part # 19-03297-93
(Purchased separately)

NOT COMPATIBLE WITH 2002-2003 FORD SUPER DUTY.

NOW STANDARD WITH EACH AMP RESEARCH POWER STEP!
