How to buy EFI Live

There are so many options for EFI Live is can be confusing. This might help you make your decision if you are new to EFI Live.

Licensing:
To understand EFI Live, first you need to understand the VIN license. Generally speaking, the VIN license is a fee we must pay in order to reflash any controller (engine or transmission computer). The VIN license is linked to a V2 that was used to create the tune files. Once the controller is licensed to a V2, that fee will not be charged again.(*SEE FOOTNOTE) The V2 is more expensive than the AutoCal because it allows you to do your own tuning. If you are not experienced with safe tuning principals, it is much more practical to have someone else use their V2 to make tunes and email them to you. Then you would use your AutoCal to download the tunes and reflash your truck. The Autocal includes your required VIN license so it recommended to purchase this device so you can have more control.

Here is a list of products we use with some details:

- Vin license - Ties a controller to a V2 - Must be purchased for each computer being tuned to a unique V2
- V2 for GM & Cummins - Write your own tune, read, license, and reflash all supported controllers. (Comes with 4 VIN licenses)
- V2 for GM - Write your own tune, read, license, and reflash all supported GM controllers. (Comes with 2 VIN licenses)
- V2 for Cummins - Write your own tune, read, license, and reflash all supported Cummins controllers. (Comes with 2 VIN licenses)
- AutoCal- We make the tune for you. You read, license, and reflash all supported controllers. (Comes with 1 VIN license)
- DSP5 switch - Installs in PCM plug, programmed in the tuning to change up to 5 tunes on the fly
- DSP2 switch - Installs in PCM plug, programmed in the tuning to change between 2 tunes on the fly
- Edge CTS - Plugs into OBD2 port, buttons on your touch screen adjust up to 5 EFILive™ tunes on-the-fly. Lots of options (Available for LB7-LLY Duramax only.)
-

*FOOTNOTE: The VIN license can be lost in a few situations. If you replace your computer or if you change from one tuner/dealer to another (change from one V2 to another for tune files).
